Precise Path Robotics named “Innovation of the Year”

TechPoint MIRA Award given to robotic greens mower

INDIANAPOLIS, IND. – May 18, 2009 – [Precise Path Robotics](http://www.precisepath.com), an Indianapolis-based company, earned the award “Innovation of the Year” for its RG3 robotic greens mower by TechPoint’s MIRA Awards, the premier technology awards program in the state of Indiana.

Presented by Indiana technology association [TechPoint](http://www.techpoint.org), this MIRA award honors the business, organization or individual that contributed most to the state's technology-related economy through an innovative product or service. Since 2000, TechPoint has honored Indiana businesses, schools and universities and individuals for their contributions to the state’s technology-related economy. The prestigious Mira Awards program recognizes leaders and innovators in 11 different business categories.

“Precise Path is excited and honored to receive this MIRA Award for Innovation of the Year,” said Doug Traster, Precise Path’s president and Chief Technology Officer. “Our robotic technology is changing the fundamental ways golf courses are maintained, and we look forward to introducing many more product innovations to the outdoor power equipment industry in the years to come.”

Precise Path’s RG3 is the first fully automated robotic golf course conditioning and maintenance mower. By using a proprietary positioning technology that trumps GPS, the RG3 moves precisely and safely across the green – traveling in straight lines and along the perimeter without the need for a human operator.
